

# Indusface Product Update

## What's New ?

The new features that have been added with the update.

1

### Offline Monitoring

A new passive engine module is bundled with WAF for offline monitoring. It minimizes false positives and promotes focused updates for existing rules based on patterns from passive monitoring.

2

### Rule Override Option

It is now possible to disable certain rules within a rule category. It enhances level of customization and offers better exception handling over WAF configurations to work with different websites.

3

### Country-based Blocking

This new feature for users and administrator allows blocking traffic from certain suspicious countries of choice.

4

### Centralized Patch Management

CPM allows us to release security updates and patches to WAF, which are picked automatically from a centralized server, saving time while keeping WAF updated.

5

### Internet Protocol Version 6 Support

Support for request originating from IPV6 address and displaying it in portal and passing it to the backend webserver via standard HTTP headers.

6

### Improved Filter

A new filter (today) is added in the user dashboard and reporting. It allows customers to get specific violation data for today (starting from now to the beginning of the day).

# Indusface Product Update

## What's Better ?

The enhancements to improve support, security, and usability.

- 1 Bandwidth Control**  
Support team will collect data and bandwidth usage per website. This can be used to ensure system upgrade if there is significant surge in traffic. It is used to co-relate this data with DDOS attacks.  

- 2 Rule Identification**  
Every WAF rule will be associated with corresponding Common Weakness Enumeration, so you can easily track its use and performance.  

- 3 Reporting optimization**  
Improved optimization of the reporting database for better performance to deal with larger data sets quickly.  

- 4 Redirection Validation**  
Malware scanning check improvement also checks for proper site redirection when landing on the site from Google search engines.  

- 5 Database Optimization**  
Database optimization helps handling large number of scans simultaneously to improve performance.  

## Other Fixes

- 1 Security Patches**  
TAS 1.0 includes multiple security patches that make it strong internally and prevent attempts to bring our services down. It helps us maintain uptime and provide you continuous services.  

- 2 PCI Scan Update**  
The scanner engine is updated with new threat vectors for more comprehensive detection.  

Indusface is an award-winning SaaS-based total application security company with more than 700 enterprise customers spread across 17 countries who trust us with their web and mobile application security.
