

Web Application Scanning Premium

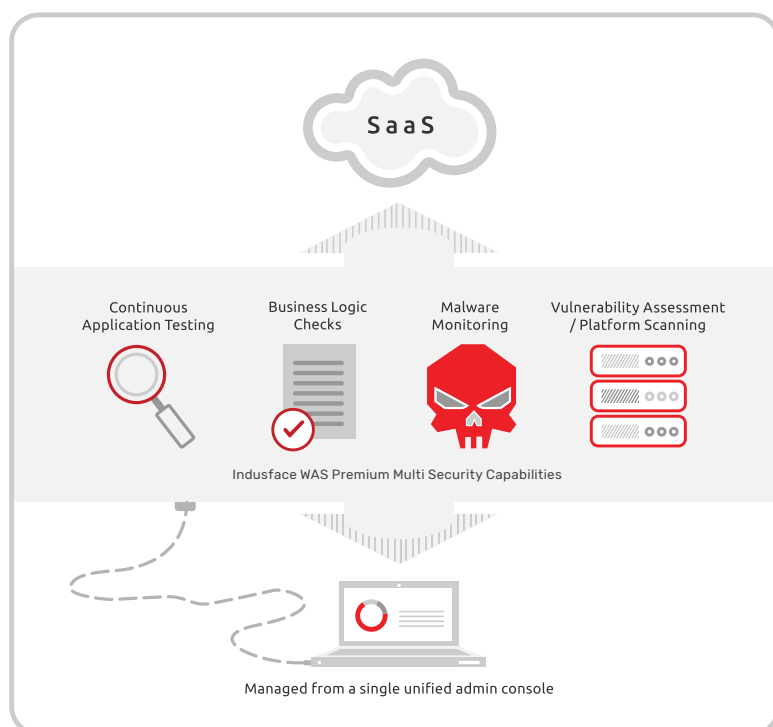

Comprehensive, In-Depth & Managed Application Security Testing

PRODUCT OVERVIEW

Indusface WAS Premium provides comprehensive dynamic application security testing (DAST). It combines automated web application scanning to detect OWASP Top 10 and malwares along with CERT-In certified security expert validation for comprehensive analysis on business logic flaws and other complex vulnerabilities. Our managed security team also provides in-depth verification and demonstration of business impacts of the complex vulnerabilities.

Indusface WAS Premium is offered as a SaaS-based solution, and provides real-time reports and summaries based on type and severity of vulnerabilities through the dashboard. It is designed to help organizations manage security across multiple web applications with daily or on-demand auditing, defacement protection and blacklisting detection.

Unique Features

- Comprehensive Dynamic Application Security Testing
- Managed by Security Experts
- Business Logic Checks
- Zero False Positives

Software-as-a-Service (SaaS)

- Pay as you go model

Technical Support

- Unlimited Proof-of-Concept
- Call and Email Support

Indusface's hybrid approach to web application penetration testing provides rich in-depth automated scanning technology with human intelligence which helps address the most challenging web security issues on a daily basis. This product has a unique centralized vulnerability management facility which gives us a single view of our security posture, thereby enabling us to effectively manage vulnerabilities using a single management dashboard

FEATURES

Unlimited Application Scanning

Daily or on-demand web application scanning to detect vulnerabilities

Comprehensive security audit to get security posture of multiple web applications

Business Logic Vulnerability Checks

Extensive auditing for application specific business logical vulnerabilities

Support on functional understanding of logical flaws for in-depth security audit

OWASP Top 10 & WASC Detection

Efficiently detect most common application vulnerabilities validated by OWASP and WASC

On-going detection of new vulnerabilities as a result of application changes and updates

Zero False Positives

Removal of any potential false positives that are found from scanning

Malware Monitoring

Ongoing monitoring of malware attack vectors and sophistication of newly discovered malware that have been effectively used and deployed by hackers

Also detects dead or inactive malware by monitoring external JavaScript and hidden iframes placed on an application

Blacklisting Detection

Ensures blacklisting tracking on popular search engines and other platforms

External URL blacklisting check helps you to protect your customers from visiting "hacked" or "infected" applications which can potentially transfer malware into your applications

Defacement Protection

Indusface WAS Advanced continuously checks your application changes and detects for possible defacement

Changes Daily defacement checks protect the brand, credibility and reputation of an organization

Proof-of-Concept

Unlimited proof-of-concepts to be provided.

Informative Dashboard

Comprehensive synopsis of reported vulnerabilities and malware along with support options in predefined report formats

Customized reporting feature allows a user to create custom reports based on desired fields and format

Managed by Security Experts

Security experts mimic exploitations from real hackers to help identify risks in real-time

Demonstration of business impact of vulnerabilities exploiting series of logical weaknesses within application

Indusface Trust Seal

Exclusive Indusface seal on your website certifying daily web application scanning

Increases trust in users, visitors, and consumers in your web security

Indusface is a comprehensive solution for web application scanning as it comes fully loaded with intelligent automated scanning engineering that is a highly scalable global platform on which companies can bank their application security upon, gaining 365 days of continuous protection. Its hybrid security methodology provides superior vulnerability detection along with high quality expert remediation, thus helping to effectively secure and safeguard our applications online.
