INDUSFACE™

DATASHEET

Indusface WAS

Industry's Most Comprehensive, AI-Powered PTaaS Platform for Websites & APIs

- Map your external attack surface
- Scan for OWASP Top 10, SANS 25 and WASC vulnerabilities
- Reduce vulnerability fatigue with AcuRisQ
- Find business logic vulnerabilities with manual penetration testing
- Uncover platform/OS level vulnerabilities on infrastructure
- Monitor for defacements and scan for malware continuously
- Get seamless reporting with automated POCs & CI/CD integration

Customer Testimonial

Indusface is a comprehensive solution for web application scanning as it comes fully loaded with intelligent automated scanning engineering that is a highly scalable global platform on which companies can bank their application security upon, gaining 365 days of continuous protection. Its hybrid security methodology provides superior vulnerability detection along with high quality expert remediation, thus helping to effectively secure and safeguard our applications online.

CISO, HDFC Bank

HDFC BANK

AppTrana's hybrid approach to web application penetration testing provides rich in-depth automated scanning technology with human intelligence which helps address the most challenging web security issues on a daily basis. This product has a unique centralized vulnerability management facility which gives us a single view of our security posture, thereby enabling us to effectively manage vulnerabilities using a single management dashboard

Website Scanning

Vulnerability Scanner - Check Website Security Comprehensively for OWASP Top 10, SANS 25 Threats and More!

Website security scanning (DAST), combined with malware monitoring and infrastructure scanning, ensures all classes of vulnerabilities are identified immediately in a single place.

Find all kinds of OWASP Top 10 threats, such as SQL Injection (SQLi), Cross-Site Scripting (XSS), Cross-Site Request Forgery (CSRF), and others, before the hackers do.

AcuRisQ – Auto-Prioritise Vulnerabilities That Pose the Highest Risk to Your Business

Along with the CVSS scores, Indusface WAS goes deeper into each of your business assets and helps you with a priority list of 'risk-based vulnerability metrics' that may pose the highest business risk if probed by attackers.

Asset Discovery

Map the external attack surface, including websites, mobile apps and APIs for your security audit needs. Improve organisational governance as security, IT, and product teams now look at a single source of truth.

Conduct vulnerability assessment and penetration testing (VAPT) on the identified assets for vulnerabilities with a single click

Penetration Testing

Complement the automated scanning with manual pen-testing, where security experts identify business logic and other hidden vulnerabilities for websites and Apps. *Complementary pen-testing and one revalidation is provided as part of Indusface WAS Premium plans.

Scan Website for Malware and Identify Defacements

Identify malware infection and defacements in real-time using an intelligent scanning system that checks for parameterized deviations in various parts of the page including DOM, internal links, JS scripts, and audio-video and others.

Authenticated Scans

Perform deep and accurate assessments of your systems with authenticated scans, uncovering vulnerabilities that may be visible only in the case of an authenticated user.

Ensure No Parts of Your Application Go Unscanned

No matter the framework, language, or technology used, our automated website security checker with its authenticated/gray box scan feature discovers all places that other scanners cannot, including:

- Single-page applications (SPAs)
- Script-heavy sites built with JavaScript and HTML5
- Password-protected areas
- Complex paths and multi-level forms
- Unlinked pages

Integrations

Integrate WAS to the CI/CD pipeline to trigger scans on new builds and create tickets to patch open vulnerabilities. You can also send scan logs to all major SIEM providers.

SwyftComply

Onboard the applications on AppTrana WAAP and autonomously patch all critical, high and medium level vulnerabilities. Get a zero vulnerability report for compliance within 72 hours.

API Scanning

API Discovery

Identify your API hosts and endpoints to spot public-facing, shadow, rogue, and zombie APIs. Effortlessly export your API inventory documentation for audits and onboard APIs for scanning with a single click.

DAST with Manual Penetration Testing

Infinite API Scanner, augmented by human guidance, ensures the best use of the API definition to uncover a wider range of vulnerabilities. Along with the OWASP top 10 for APIs, detect business logic vulnerabilities with embedded manual penetration testing.

Remediation Guidelines

Empower developers with detailed guidelines to fix vulnerabilities using comprehensive reporting structures.

Plugin Based Architecture

With pluggable modules, pen testers and in-house security teams can write scripts to automate security test cases.

API Protection

Onboard the selected APIs on AppTrana WAAP. Protect them from DDoS and bot attacks by deploying positive and negative security models on the APIs.

Unique Value Proposition of Indusface WAS

- Unlimited proof of vulnerabilities
- Zero false positives guarantee
- Application & infrastructure vulnerability scanning with malware monitoring
- 24*7 Support
- OWASP top 10, WASC, SANS 25 and Zero-day vulnerability detection in one place
- Accurate risk quantification with AcuRisQ
- Automated scanner + manual penetration testing

Indusface WAS for websites

Key Features	Benefits	Advance	Premium	MSSP Edition
		$59/App/Month Billed Monthly	Custom/ Custom Billed Annually	Custom/Custom Billed Annually
Asset Discovery				
External Asset Discovery	Asset Discovery of web & mobile apps and API Hosts (Subdomain, IP, Data Center, Site type, TLD)	Yes	Yes	Yes
Unlimited On-demand Scans	Scheduled Auto Discovery	Yes	Yes	Yes
Automated Web Application Security Scanning				
Managed Application Security Scanning	Indusface WAS automatically scans your site for OWASP Top 10, PCI DSS 6.5.x, SANS Top 25 Vulnerabilities and more	Yes	Yes	Yes
Full Support of HTML5 , AJAX and JSON	Support to Scan JSON , AJAX and HTML5 based sites	Yes	Yes	Yes
Remediation Guidance to fix vulnerabilities	Get detailed information on how to fix the vulnerabilities	Yes	Yes	Yes
Vulnerability Revalidation Checks	Fix the vulnerabilities and have it quickly revalidated to know if vulnerabilities are properly addressed	Yes	Yes	Yes
Guided scans	Guided Scans can be enabled to ensure automated scans reaches pages that other scans cannot	Yes	Yes	Yes
Guided Authenticated scans	Recorded steps could be automated to perform guided scans.	Yes	Yes	Yes
Authenticated scans	Provide authentication details and have scans be done behind authenticated pages	Yes	Yes	Yes
Proof of concepts	Get proof of concept for the vulnerabilities, enabling teams to prioritise work on right vulnerabilities	5	Unlimited	Unlimited
Automated False Positive Removal	Scan results are manually verified and false positive are removed for Critical & High vulnerability automatically	No	Yes	No
Pen-testing by experts*	Have experts ethically hack your sites and find business logic vulnerabilities	No	1	No
Revalidation Scans	Vulnerability Revalidation checks providing customer option to check that patch is working	Yes	Yes	Yes
Out of Band Vulnerability Detection	Ability to detect vulnerabilities that are determined out-of-band and not based on response to a request	Yes	Yes	Yes
AcuRisQ	Accurate Risk Quantification of vulnerabilities and assets by looking beyond CVSS score and focusing on context of vulnerability reducing vulnreability fatigue and providing priortised list of vulnerabilities that maner	Yes	Yes	Yes
Daily Scans	Ability to schedule automated scans based on need including daily scans	Add-On	Add-On	No

Key Features	Benefits	Advance	Premium	MSSP Edition
Platform Scans	Identification of platform level vulnerabilities	Yes	Yes	Yes
Network Scans	Identification of OS/Infra level vulnerabilities	Yes	Yes	Yes
Open Port Scans	Identification of all Open-ports part of infrastructure	Yes	Yes	Yes
CI/CD - Jenkins Integration	Identify vulnerabilities in the dev. cycle by integrating Indusface WAS in the CI/CD pipeline	Yes	Yes	Yes
Issue Management - JIRA Integration	Manage vulnerabilities by integrating Indusface WAS with your JIRA ticketing tool	Yes	Yes	Yes
Malware Scans				
Advanced Crawler for malware	Advanced Crawler that helps crawl pages through malware scanner to identify malwares	Yes	Yes	Yes
Blacklisting Detection	Ensures blacklisting tracking on popular search engines (Google, Bing, Yahoo) and other platforms	Yes	Yes	Yes
Foreign Link	External URL blacklisting / reputation check helps you to protect your customers from visiting “hacked” or “infected” applications which can potentially transfer malware into your applications	Yes	Yes	Yes
Deterministic Malware Detection	Ongoing monitoring of malware attack vectors and sophistication of newly discovered malware that have been effectively used and deployed by hackers	Yes	Yes	Yes
Defacement Detection	Checks your application changes and detects possible defacement changes	Yes	Yes	Yes
Malware Code Snippet	Also detects dead or inactive malware by monitoring external JavaScript and hidden iframes placed on an application	Yes	Yes	Yes
Continuous Malware & Defacement Scans	Scans done every 30 mins and FPs removed before customer notified incase of defacements	No	Yes	Yes
MSSP Features				
Multi-tenant Vulnerability Management Platform	Ability to manage multiple tenants and their vulnerabilities on same platform	No	No	Yes
Consultant Workflows	Add additional vulnerabilities found through manual pen-testing and other sources seamlessly with a few clicks	No	No	Yes
Quick Report Creation	Automated Report creation along with prefilled information around vulnerability details and remidiations	No	No	Yes
Editable Database	Ability to edit canned details based on application/project needs including ability to edit CVE, CWEs, PCI DSS and OWASP Categories as required	No	No	Yes

Vulnerability Management Workflows	Ability to review findings from automated scanner and whitelist them based on business needs	No	No	Yes
CoBranded Reports	Reports that can be provided to customers with consultants logo	No	No	Yes
CoBranded Dashboard	White labelled portal with consultant branding to provided to their clients	No	No	Yes
Key Features	**Benefits**	**Advance**	**Premium**	**MSSP Edition**
Import Third Party Scans	Ability to import scan results from third party scans	No	No	Yes
Scalable Dynamic Application Scanning	Start multiple parallel scans at the same time for your client's application and get comprehensive findings in the consultant portable	No	No	Yes
Role based Consultant Dashboard	Role based control to consultant dashboard to effectively manage complex projects across larger teams	No	No	Yes
Other Features				
Centralized Dashboard	Centralized Dashboard for management of vulnerabilities of assets.	Yes	Yes	Yes
Executive Report	Canned reports for executives that gives trends across various assets and actionables	Yes	Yes	Yes
Groups	Ability to create groups and assign assets to various groups based on business needs	Yes	Yes	Yes
Detailed Reports	Detailed asset level reports for various scans.	Yes	Yes	Yes
Multi-User	Ability to create any number of users based on business need	Yes	Yes	Yes
Target Management for users	Ability to assign different assets/groups to various users based on business needs	Yes	Yes	Yes
SSO	SAML based integration to support single sign on	No	Yes	Yes
SIEM Integration	Support of seamless SIEM integration with S3 bucket where scan logs are put	No	Yes	Yes
2FA Support	Multifactor authentication for user access to the portal	Yes	Yes	Yes
Flexible Reporting	Ability to create customized reports based on business need and create reporting schedules	Yes	Yes	Yes
Trend Graph	Trend graphs across various assets and scans are automatically provided	Yes	Yes	Yes
Role Based Administration	Customizable RBAC to ensure users are provided rights based on need	Yes	Yes	Yes
Support	24X7 unlimited e-mail support. Dedicated on call support during business hours. Prompt response and resolution turnaround time on support query requests	Yes	Yes	Yes

Indusface WAS for APIs

Key Features	Benefits	WAS - API Advance	WAS - API Premium	WAS - API MSSP
Asset Discovery				
External Asset Discovery	Asset Discovery of web & mobile apps and API Hosts (Subdomain, IP, Data Center, Site type, TLD)	Yes	Yes	Yes
